

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

those Salts, upon the contact of one another, or of Mineral Bodies, are the Efficient causes of Heat in those Springs; he thence takes occasion to teach, How *Artificial Baths* may be made analogical in virtue and operation to the *Natural*: shewing withal the efficacy of Hot Springs and Baths, whether Natural or Artificial, in curing most of the stubbornest Diseases.

Fourthly, The Author digresses to the Vindication of *Chymical Physick* describing first, what the Chymical Art is; next, endeavoring to remove the reproach laid on it: and lastly, declaring the great assistances thereby afforded to Nature, above ordinary Shop-preparations, in order to the Cure of Diseases: From which last he takes occasion to expatiate into the praise of this Art, upon the account also of its great usefulness for improving Experimental Philosophy, and for penetrating into the Principles of all Concretes, whether Vegetable, Animal, or Mineral: inserting withal, by way of digression, his thoughts of an *Universal Character*; meaning such an one, which, being known in all parts of the World, should signify the same thing in all Countreys; so that all People skill'd therein should every where read it every one in their own Language.

To all this is annex'd an *Appendix* concerning the *Original of Springs* in general, in which the Author admits, that Rain-and-Snow-waters are indeed the proximate Cause of all Land-Springs and sudden Floods, filling the Porosities and Channels of the Earth's surface, and that the remaining part restagnats, till it meet with convenient Currents out of Brooks and Ditches into other Rivolets, and those again, by further passages, swell into Rivers, and thereby cause Inundations of low grounds, till those Rivers empty themselves, by other intermediate ones, into the Sea itself: But that the same should be the cause of the *Fontes Perennes*, or Living Springs, he positively denies; advancing this *Thesis*, That there is a *Circulation of Water* in the *Terraqueous Globe*, as requisite to its well-being, as the *Circulation of Blood* in *Animals*, whereby the water, through subterraneous Channels along the *Sabulum bulliens*, runs from Sea to Sea, and also from the Sea to the Heads of Springs, and from them into Rivolets, and those into Rivers, and thence into the Ocean, and so circulates round: which, he saith, includes also another Circle of Rain and Snow, which first arising by Exhalations from the Sea and Earth, are carried down again upon the Earth and Sea, and joyning issue with Rivolets from Springs, do swell Rivers, which again discharge themselves into the Sea.

Lastly, The Author concludes, first, with an account he gives of a *Ternary of Medicines* used by himself, for curing many Diseases; viz. 1. *Cathartick*, or Solutive; 2. *Cordial*, or expelling of Wind; 3. *Diaphoretick*, or Sweating. The first he calls *Scorbatick Pills*; the second, *Elixir Proprietatis*, or *Cordial Elixir*; the third, *Diaphoretick*, or *Sweating Pills*. Which three Preparations, he saith, are composed of the best Vegetables, extracted by Salts, that are graduated to the highest pitch; experienced by himself to be both safe and effectual in the cure of Diseases. Secondly, with a Description of the *Essence*, as he calls it, of *Scarbrough Spaw*; which he maketh to be the remainder after divers fabulous separations; viz. a kind of *Alumino-nitrous Salt*, which, being duly order'd, shoots into long *Christalline Stiria's*, and branches it self forth in curious shapes in the bottom of the Glais, exposed to a *Balneum Mariæ*.

Errat. N^o 41. p. 826. l. 21. r. ut fiant, ib. l. 30. r. augentur, p. 827. l. 23. r. Tellure, ib. ult. r. quid, p. 832. l. 35. r. notanda.

Errat. N^o 42. p. 838. l. 15. r. proceed in, p. 844. l. 17. r. albuginea, ib. l. 29. r. videre est.

In the S A V O Y,

Printed by T. N. for John Martyn, Printer to the Royal Society, and are
to be sold at the Bell a little without Temple-Bar, 1608.
